

GREENWOOD

Commercial and Industrial Buildings

Introduction to GreenWood

For over 11 years GreenWood has been supplying buildings (workshops, calf sheds, implement sheds, woolsheds, feed-pad shelters) and farm bridges throughout the country. More recently, in 2012 GreenWood purchased the "Steel Sheds" (Canterbury) business and renamed as GreenWood Commercial and refocused strongly on larger, industrial and commercial buildings. These buildings are typically large warehouses, pack-houses, or factory buildings, most with adjoining offices. The steel structures of GreenWood Commercial buildings are designed, detailed and engineered by our in-house designers and engineers, and the manufacture of these structures are in our factory. GreenWood buildings have been constructed on both "good ground" and on low load-bearing ground conditions.

Recent Projects

Location: Rolleston

Floor Area: Warehouse: 1062m2 Office: 60m2 Total 1122m2
